

## **Bertrand Meyer**

Bertrand Meyer is Professor of Software Engineering at ETH Zurich and founder and CTO of California-based Eiffel Software. He is also the director of the Software Engineering Laboratory at Innopolis University (Kazan, Russia). His work has covered many areas of software engineering, in particular object-oriented programming, which he contributed to developing and popularizing, particularly through his books. He has also published extensively on formal methods and program verification, starting with co-authoring the first paper on Z.

Bertrand is active on both the academic and industrial scenes and recently published a detailed analysis and critique of agile methods, “Agile! The Good, the Hype and the Ugly” (Springer). He was chair of the CS department at ETH Zurich in 2004-2006 and has been active in CS policy issues. As the founding president of Informatics Europe from 2006 to 2012, he took an active part in many Informatics Europe initiatives and reports, on topics such as CS education in schools, CS researcher evaluation, and the regular “Key data” reports on informatics education. He is the recipient of an ERC Advanced Investigator Award (2012-2017), “Concurrency Made Easy”.

His awards include the Jolt Award for his book “Object-Oriented Software Construction”, two honorary degrees including one from the University of York, Dahl-Nygaard prize, ACM Fellow, and the ACM Software System Award.
