Dr Daniel Goldsmith

My interest in computing started in the early 1980's when his Grandfather introduced me to the ZX80, a machine that still has pride of place on his desk today.

I now have 10 years experience in teaching Ethical Hacking, and Cyber security, with a focus on the more "fun" elements, such as Penetration testing, and Exploit development.

When not teaching, I am responsible for the overall strategic direction of the course, which means I get to design new, and interesting ways to teach and assess our students.

My main interest is how we can make use of gamification to get the practical concepts across to the students, exploring the opportunities containerisation gives us for deploying lightweight, repeatable tasks and challenges.

When not working, I enjoy getting out in the countryside, and Morris dancing.
